

agPROACTIVE[©]

agPROACTIVE is a digital maintenance management program accessible from AgriSphere's Client Portal virtual workspace system that connects clients with information, resources, and training they need to protect and extend the life of their facility's physical assets. AgriSphere's agPROACTIVE provides clients access to current maintenance management techniques and documentation that will assist in reduction of down time and extended the life of equipment and machinery.

This portal includes content and resources in areas such as:

- equipment lists and inventories
- maintenance scheduling
- work order generation/issuance, management, and record-keeping
- frequency of service
- maintenance procedures
- maintenance records
- safety procedures such as "Lock-out/Tag-out"
- parts management and inventorying

Why agPROACTIVE[©]?

Asset management program

agPROACTIVE utilizes historical and current data from equipment monitoring systems to transform your maintenance program from corrective to preventative to ultimately predictive maintenance to provide for enhanced scheduling.

Reduction of down time

Transition away from having to respond to broken equipment or shutting down for routine maintenance during busy operational times by utilizing the preventative and predictive maintenance models of agPROACTIVE.

Records and Regulatory compliance

With agPROACTIVE all maintenance records are formatted in standardized documents and forms and filed into an easily accessible and searchable electronic data libraries allowing for pattern recognition analyses that are the basis of predictive maintenance.

Safer more efficient operation

All maintenance and safety procedures are easily referenced and training guides are more accessible and job-specific which decreases pressure and stress on employees.
