

What others are saying...

FeedTrackur has given us an opportunity to close the loop on traceability from the mill to the farm. It has allowed us to get ahead of potential driver issues by providing further awareness of sequencing as well as gives the delivery team additional double checks. We feel FeedTrackur is a step in the right direction on providing our customers reassurance of their feed deliveries.

Nathan Kier, CEO DFS Inc.

The first thing I think of when talking about FeedTrackur is their exceptional customer service and how well they follow up on projects in a timely manner. FeedTrackur has helped our team out by providing full traceability from the mill to the site, has cut back on wasted man hours by allowing us to track every driver and has allowed us to capture inefficiencies in our delivery process.

I highly recommend FeedTrackur to any company and view it as an essential tool for all feed mills.

Heath Karns, Asst. Plant Manager, Ag Partners L.L.C.

FeedTrackur is a huge plus for us all around. Our customers have greatly appreciated the traceability of their feed and specifically like the notifications, which let them know when feed was delivered and if there was excess left over that had to be dropped in a different bin.

Matt Repking, Quality Control manager, The Equity

**Right Feed at the Right Place
at the Right Time**

www.dpotechlink.com

Feed mills today use sophisticated software to track and fulfill orders including batching for manufacturing feed and loadout systems for filling trailers. As soon as the feed leaves the mill the operators lose visibility and traceability of that order. Feed companies resort to using manual systems. All delivery metrics such as route taken, stops made, total miles driven, and unload time are lost. In most cases, the mill and their customers are unable to validate if or when a delivery was made and whether **the right feed was delivered at the right place at the right time.**

WHAT FEEDTRACKUR™ IS...

TECHNOLOGY

FeedTrackur™ is a dynamic hardware and software application that integrates wireless and tablet technologies to manage feed orders from mill to farm, all while capturing and displaying critical real-time data. FeedTrackur™ keeps everyone informed on orders, deliveries, and schedules. FeedTrackur™ automates the entire process making it more efficient and accurate.

EXPERIENCE

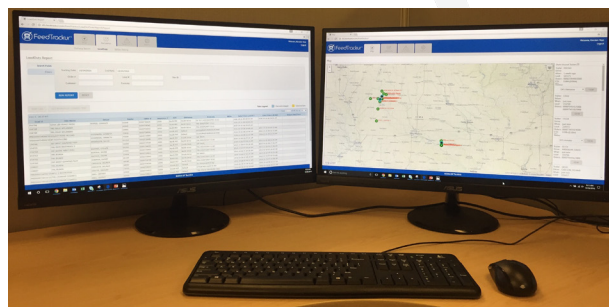

FeedTrackur™ was developed by industry-leading professionals to address the challenges feed mill operators face today.

RESULTS

With Feedtrackur, livestock producers are able to validate that their nutrition plans are on target and delivering maximum results. Feed mills will increase productivity, eliminate mistakes and offer more value to their customers every day.

GETTING STARTED

FeedTrackur™ provides turn-key integration and support, making getting up and running fast and easy. Contact a DP Techlink representative today to get started!

FEEDTRACKUR™ PROVIDES:

GPS AND CELLULAR TECHNOLOGY

accurate tracking of data and information of your vehicles without the need of an internet connection.

TRACEABILITY

precise operational control including transparent tracking and traceability of feed from order to delivery, eliminating risk.

REAL TIME NOTIFICATION

notifies customers via text or email when their feed has left the mill and when it is delivered to their site.

ENHANCED CUSTOMER SERVICE

ensures right feed, right place, right time. Provides customized, in-depth reporting on an easy to use interface.

POWERFUL SOLUTIONS

customized in-depth reporting, increase in driver efficiency and asset productivity. FSMA & VFD compliant.
